
PROFESSIONAL SUMMARY

Full Stack Software Engineer experienced in designing and developing scalable web applications in C#, .NET Core, Web API, Angular, SQL Server/PostgreSQL and Azure Functions. Experienced in building scalable SaaS applications, REST APIs, reusable frontend components & managing CI/CD pipelines and cloud-based solutions. Strong hands-on experience across frontend, backend, database and cloud layers with a focus on performance, reliability and maintainability.

WORK EXPERIENCE

Software Engineer | Technovate One

Jun'26 – Present

- Architected a Trend Forecasting Module that consolidated 3 separate backend API calls into single unified endpoint with client side metric filtering, significantly reducing server loads & network overhead.
- Owned end-to-end delivery of a full-stack Angular 22 SSR platform for a Government Agency client architecting a Strapi v5 headless CMS backend with custom content types, REST API integration, and role-based content access control from initial design to production deployment.

Associate Software Engineer | TatvaSoft

Jan'24 – May'26

- Led the transformation of a legacy monolithic Tire Dealer Management System into a cloud-native, microservices-based architecture using Azure Functions & Azure Blob Storage, enabling modular application development and improved scalability.
- Managed CI/CD pipelines in Azure DevOps for development environment testing to streamline delivery and catch integration issues development cycle.
- Collaborated with clients and cross-functional teams in Agile sprints, translating requirements into technical solutions, coordinating development activities, and supporting iterative feature delivery.

PROJECTS

Digital Marketing Platform

- Designed a central server to act as an integration hub for **multi-tenant digital marketing platform**, ensuring all third-party API calls were routed, tracked, and controlled centrally for better observability and security & also reducing the need for duplicate applications
- Implemented a centralized **Failed API Call Logging System** along with a custom **Background-Service (Cron Worker)** that periodically retrieves pending failed API requests, reconstructs them using stored metadata, and safely retries them using dependency injections.
- **Tech Stack:** Next.js 16, NET 8 (C#), EF Core, PostgreSQL, JIRA, Azure Repos

Performance Assessment System

- Architected and implemented **dynamic KRA/KPI scoring algorithms** to quantitatively evaluate employee performance and generate objective grading and appraisal outputs in a scalable application architecture and multi-level appraisal workflows used by HR teams across the organization.
- Created **reusable Angular components** to improve UI consistency and development speed and optimized stored procedures to reduce page load times, improving application responsiveness and scalability.
- **Tech Stack:** Angular 18, .NET Minimal API (C#), EF Core, LINQ, PostgreSQL

Warehouse Management System

- Designed and developed a Warehouse Management System using **.NET Core Minimal API (C#)** and **React + TypeScript**, implementing **JWT authentication** and **claim-based authorization** to enforce role-specific access.
- Integrated **SignalR** for real-time inventory update notifications and order status tracking; architected **PostgreSQL** database schema with optimized entity relationships for high-throughput inventory tracking, order management, and user activity logs.
- **Tech Stack:** React + TypeScript, .NET Core Minimal API (C#), EF Core, SignalR, Azure Repos, PostgreSQL

SKILLS

- **Programming Languages:** C# (.NET), SQL, JavaScript, TypeScript
- **Frontend:** Angular 18+, React.js, Next.js, PrimeNG, Bootstrap, Tailwind CSS
- **Backend:** ASP.NET Core, .NET Core 8, .NET MVC, jQuery, EF Core, LINQ, Strapi v5
- **Database:** SQL Server, PostgreSQL, MongoDB (Indexing, Stored Procedures, Normalisation)
- **Cloud & DevOps:** Azure Functions, Azure Blob Storage, Key Vault, Azure Repos, Agile/Scrum

EDUCATION

LDRP Institute of Technology, Gandhinagar, Gujarat

2020 – 2024
